

POWDER COATING

Powder Coating, by B&B Painting, is the finish of choice if you need a tough, abrasion resistant, and beautiful finish for automotive parts, outdoor furniture, or any other metal products.

Powder Coating was first introduced in Australia in about 1967. It is the technique of applying a positively charged dry powder to a negatively charged part. The piece is then placed in a high temperature oven and the powder is cured, melting the powder and producing the final finish.

B&B Painting offers you a huge selection of colors. We can handle a large variety of

Coated parts hanging in oven to be cured

parts with our six foot walk-in oven and provide you service from parts preparation, to coating, to final curing. We offer quick turnaround and very competitive pricing.

Some Uses for Powder Coating:

- Automotive Parts
- Outdoor Furniture
- Agricultural & Construction
- Machine Shops & Custom Fab Parts

PAINTING

Painting Services at B&B Painting can provide you with the paint color and quality that your project demands. B&B Painting's staff has years of experience in automotive and heavy equipment repair and refinishing.

Motorcycle Painted by B&B Painting

We can provide most any type of auto body repair, from small spot repair jobs, to rust through repair, to a full-on restoration and complete color change. We can match any paint color so your vehicle looks like new. We also do custom paint work, including flames, painted stripes, and customized graphics.

For heavy equipment, after sandblasting, we will use the factory paint color and we'll even apply new factory decals so your machine retains that factory look.

The bottom line is that if you demand high quality and competitive pricing for your painting needs, call us or visit us on the web.

SANDBLASTING

Sandblasting is the process of removing paint, rust, and other surface imperfections by moving sand across the surface at high speed and pressure. This provides a clean, smooth surface ready for paint or Powder Coating.

B&B Painting has been using Sandblasting as a surface prep for heavy equipment and small parts for years. We are one of the leading shops in the area that provide this service for Heavy Equipment. After sandblasting, each piece is sealed with epoxy primer before painting, or it goes straight to powder coating prep.

We can handle most any job, large or small. Give us a call to find out more.
